

Alex Kellas

Software Engineer

Personal Profile:

Experienced full-stack Software Engineer with specialising in web applications using both C# .NET framework, as well as React. An approachable, flexible, hard-working and reliable colleague adept at working as a collaborative and proactive team member. Keen to take on new challenges, solve problems and expand upon existing skill sets.

Qualifications:

- MSc Computer Science
- BEng Mechanical Engineering
- Level 1 KUKA Robot Operator

Technical Skills:

Languages & Frameworks:

- C# (.NET 6-9, Blazor, WPF)
- Typescript / JavaScript
- React
- Python (Django, Flask, Scripting)

Databases:

- MongoDB
- MySQL / SQL

DevOps & Tools:

- Azure DevOps
- Git
- Docker
- Shell Scripting
- Kubernetes

Other:

- Visual Studio
- Agile / Scrum work pattern
- REST API's
- MVVM Pattern
- Microservices Architecture

Project Experience:

Designing and Creating a Portable Stereo Baseline Application for a Stereo Based Vision System

Problem: Insphere's native stereo-based vision system (IONA) would often lose calibration during travel or manual handling

Solution: Working with the product team, I developed a portable calibration routine that integrated with an existing WPF application. The process guided users through calibration using a bespoke artefact and target detection. This involved the creation of a custom target detection, and labelling algorithm, as well as designing and implementing a guided UI for the user

Legacy Troubleshooter Platform Regbuild (Java => WPF)

Problem: Legacy java-based troubleshooter software (externally maintained) was slow, unreliable, and difficult to extend.

Solution: Led redevelopment of the platform in WPF with a custom API, replacing legacy system. Worked with stakeholders to define requirements and deliver a more stable, maintainable internal tool with improved UX and reliability.

Ora Application Upgrade - From WPF to Blazor Service-Based Application

Problem: The legacy ORA application was tightly coupled with Insphere's native IONA system and was limited to single-instrument, and single robot connectivity, constraining the applications scalability and flexibility

Solution: Leveraging a microservices architecture, the team used a lightweight Blazor front-end to interact with the modular service plugins. My role in this project involved building the Blazor application, implementing the front-end functionality for key services creating an interop pipeline and visualising results using a ThreeJS-powered environment.

Languages:

English (Native Speaker)
Spanish (B2)
Italian (A2)

Personal Interests:

- Experienced Rock Climber
- Skiing and snowboarding
- Reading
- Learning languages, living and working internationally

Employment History

Likewise — *Full Stack .NET Software Engineer (Jan 2026 – Present, Onsite)*

- Responsible for the development of 20+ customer sites spanning both the .NET and React ecosystems. Responsible for the ground-up build of a new WPF troubleshooter application.
Key Skills: React, WPF, TypeScript/JavaScript, C#, API Development, .NET 8, Unit Testing

Insphere Ltd — *Remote / Hybrid (Nov 2022 – Aug 2025)*

- **Software Engineer** (Oct 2024 – Aug 2025, Remote)
Responsible for building the company's new Metrology Automation software (ORA).
Key Skills: Blazor, C#, TypeScript/JavaScript, WPF, Unit Testing, .NET 8
- **Product Engineer** (Nov 2023 – Oct 2024, Hybrid)
Responsible for the build and maintenance of internal software tools to aid development and manufacture.
Key Skills: C#, WPF, .NET 6/7, Python (Flask, Scripting), TypeScript/JavaScript, Automation, Linux
- **Applications Engineer** (Nov 2022 – Nov 2023, Hybrid)
Responsible for the installation and integration of metrology systems into robotic systems, alongside development of internal tools.
Key Skills: Metrology, Python (Flask, Scripting), JavaScript, Automation, Customer Support & Liaison

Banana Fingers Ltd — *Specialist Retail Outlet Manager (Jul 2021 – Nov 2022)*

- Responsible for establishing an on-site shop adjacent to a large warehouse distributor of climbing clothing and equipment. Built the on-site business from zero to > £350,000 annual turnover.

Education

- [Sep 2022-Aug 2024] Keele University
 - MSc Computer Science (Part-Time)
- [Sep 2018-Jun 2021] University of Exeter
 - BEng Mechanical Engineering
- [Sep 2017-Jun 2018] Bristol College
 - Access to Higher Education (Engineering)
- [Aug 2016-Jul 2017] Belmont High School, MA, USA
 - Senior Year High School
